

Get Started - FIS

To obtain an FIS certificate, you must have an Exostar's Identity and Access Management Platform (formerly known as MAG) account. For more information on Exostar's IAM Platform access and credentials , please see [Exostar's Identity and Access Management Platform \(formerly MAG\) page](#).

Step 1. [Complete Organization Registration](#)

Step 2. [Complete User Registration](#)

Step 3. [FIS Administrator Authorization](#)

Step 4. [In-Person Proofing \(for MLOA ONLY\)](#)

Step 5. [Certificate Download](#)

Step 6. [Hardware Token Installation](#)

Exostar's Federated Identity Service (FIS) issues digital certificates for the following levels of assurance in compliance with the CertiPath (the PKI cross-certification bridge) policies:

- Basic Level of Assurance Certificates (BLOA)
- Basic Level of Assurance Certificates (BLOA)-SecureEmail
- Medium Level of Assurance (MLOA) Software Digital Certificates
- Medium Level of Assurance (MLOA) Hardware Digital Certificates

Exostar also issues the MLOA Software and MLOA Hardware certificates for the following validity periods:

- 1 year
- 3 years

NOTE: You are invoiced and must pay prior to issuance of MLOA certificates.

As a user you are required to provide the FIS Administrator with the right information to make an approval decision for your certificate request. As an FIS Administrator (FISA), you are required to approve user for the appropriate certificate based on their project requirements. Your organization may incur costs associated with the FIS certificates. In the table below, the top row represents the various attributes you are required to select for the certificate request to guide you to make the appropriate decision:

IMPORTANT: It is very important you select the correct Partner/Application to ensure you are invoiced (as required) correctly for the certificates.

Partner / Application	Certificate Assurance Level	Certificate Usage	Certificate Type	Validity Period	Request Reason
BAE Systems	Medium	N/A	Software	3 years or 1 year	Select any based on your project requirement.
Bell Helicopter	Medium Or Basic	N/A Identity	Software	3 years or 1 year 1 year	Access Application or any other as required
Boeing	Basic	Secure Email	Software	1 year	Sign & Encrypt Email
Exostar ForumPass - US	Basic	Identity	Software	1 year	Access Application or any other as required
Exostar ForumPass - EU	Basic	Identity	Software	1 year	Access Application or any other as required
Northrup Grumman - OASIS	Medium	N/A	Hardware	3 years or 1 year	Access Application or any other as required

The following information provides additional guidance in selecting an appropriate certificate if your application is not listed above:

- **FIS BASIC:** A user receives only an identity certificate if this option is selected. An example of the use of this certificate is to access the sensitive sites in the ForumPass application.

- **FIS BASIC-SecureEmail:** A user receives three certificates they are primarily used for sending encrypted emails.
- **FIS MLOA Software:** To receive FIS MLOA Software certificates, a user must complete an in-person proofing with an Exostar Trusted Agent provided by NotaryGo or Verify Europe. A user may need these certificates for access to partner sites. You or the user should receive feedback from the partner organization/Exostar on the specifics of the FIS certificates to use.
- **FIS MLOA Hardware:** For FIS MLOA Hardware certificates, you must complete an in-person proofing with an Exostar Trusted Agent provided by NotaryGo or Verify Europe. A user may need these certificates to access partner sites. In addition, a user requires a hardware token issued by Exostar to maintain these certificates. You or the user should receive feedback from the partner organization/Exostar on the specifics of the FIS certificates to use.

NOTE: Your organization must subscribe for FIS MLOA (Software) or MLOA (Hardware) for users to request these certificates. If your organization is not subscribed at the appropriate assurance level, refer to the MAG User Training page and MAG User Guide for information on upgrading your organization's FIS account.

IMPORTANT: If your organization is approved for both FIS Basic and MLOA (Software), select the appropriate level of assurance for the user based on their requirements. For detailed step-by-step information on how to approve a user's FIS request, refer to the Learn FIS page. There may be additional costs associated with FIS MLOA (Software) for the proofing activity.
