## PIM 3.0 Release Notes – February 2020

The following is a summary of new or modified functionality or feature in PIM 3.0:

### Modifications to the Cybersecurity Supply Chain Risk Management (C-SCRM) Form

The Cybersecurity Supply Chain Risk Management (C-SCRM) form was modified with the following: (1) addition of a scoring methodology to score submitted C-SCRM forms; (2) revisions to the wording of several follow-up questions on the form that request more information regarding the "yes-fully", "yes-partial" or "no" responses to the main questions on the form.

The scoring, in summary, allocates specific points for the "yes-fully", "yes-partial" or "no" answer to each question, and then adds these points together to get a total sum that serves as the score. The score is then explained and reported in the Form Details page for the submitted form in PIM, as well as the output Feedback PDF report that exists for every submitted form.

In addition to the scoring, to provide additional clarity for the supplier completing a form, several questions that serve as follow-up questions to the main questions on the form were re-worded.
