Overview

Lockheed Martin’s Procure to Pay (LMP2P) portal represents an enterprise-wide implementation of the procure to pay systems suite which enables organizations to access Lockheed Martin's eBusiness functions through Exostar's Managed Access Gateway (MAG). This includes access to the following:

- **Characteristics Accountability Verification (CAV):** Used to determine and verify the critical and major characteristics that must be met to assure performance of the function of a major system or subsystem.
- **Field Quality Service Management System (FQSM):** A secure, web-based system that provides suppliers, technical specialists and Lockheed Martin administration personnel with an application for requesting source inspection, scheduling and tracking activities.
- **LM eInvoicing** (formerly DCI): Application used to provide fast and accurate invoice submission, view purchase orders, submit credit memos, view invoice status and view payment status. Application Administrators will be responsible for managing user access roles:
  - **View Only Access** – Does not require a two-factor authentication (2FA) credential. Allows user to view data only.
  - **Full Access** – Requires a two-factor authentication (2FA) credential. Allows user to create, edit and view invoices and view purchase orders.
- **Schedule Management Module (SMM):** A secure, easy-to-use, web-based application enabling expeditors, suppliers, program offices, and buyers to provide periodic deliverable updates. Including the management of open Purchase Order (PO) lines and schedule agreement release lines with participating Lockheed Martin businesses.
- **Supplier Collaboration Hub (SCH):** A portal interface for participating business areas where expeditors, suppliers, program offices and buyers can gain quick access to tools and information needed to manage and collaborate on Purchase Orders.
- **LM Fieldglass:** This application is a cloud-based, subcontract labor invoicing system which offers Lockheed Martin businesses a solution for managing contingent labor and subcontracting resources. This tool replaces the Lockheed Martin Vendor Invoice Processor (VIP) system and is accessible through the portal or bookmark (requiring MAG login) for direct, secure access.

The Enterprise Access Gateway (EAG) allows Lockheed Martin employees to use their Lockheed Martin network login credentials to access Exostar and other third party applications such as NASA instead of being issued login credentials from Exostar.

Click the arrow below to read further about the overall process to access the Lockheed Martin Procure to Pay (LMP2P) service.
