# AG 7.0 Highlights

e

## MAG 7.0 Highlights

### Your browser does not support the HTML5 video element

---

#### Login

Alongside our new interface, we've made the experience of logging in more versatile, giving users the option to login with their email address, as well as their User ID. If you have more than one account, please login using your User ID. Forgotten your credentials? We've also made the account recovery process quicker and more secure with support for a wide range of verification methods.

---

#### Dashboard

We've worked hard to make the dashboard more intuitive, and with clearly defined areas for each of your tasks we're sure you'll find this a great way to launch into your apps and services. Divided into three clearly defined spaces, we've ensured the functions you need are logically grouped together:

- Inside the 2FA module on the dashboard you'll find a snapshot of your 2FA credentials and links to manage your security settings.
  - We've created a dedicated space for all your applications, making it easier to find and access your current applications - and request access to new ones. Inside this area, each application is presented in a modern card style with context sensitive buttons that ensure you're always set up to access.
  - We've also introduced a range of management panels to the dashboard, links to billing and support services and invoicing.
- 

#### Purchase 2FA

We've overhauled the process for purchasing and managing your security credentials for a simpler purchase flow. Now you have access to exactly the credentials you need when you need them!

---

#### Onboarding / Registration

The MAG Registration flow for your organization and new users is now quicker and easier. Removing many of the steps there previously, we've made it simpler to get into the dashboard and we're prompting you to get your security credentials only when you need them.
